Summary

Final-year IT student with hands-on experience in SQL, Python, and explainable ML—from cleaning and reconciling large, messy datasets to building models with 96%+ accuracy and interpretable outputs via SHAP and Grad-CAM++. Experienced in translating raw data into business-ready dashboards and insights using Tableau and Python (Seaborn, Matplotlib).

Technical Skills

Programming Languages: Python, JavaScript, Java (Basics), C
SQL & Databases: Joins, Subqueries, Window Functions, Aggregate Functions, CTEs, MySQL, MongoDB
Data Analysis: Pandas, NumPy, EDA, Data Cleaning, Statistics
Data Visualization: Power BI, Tableau, Matplotlib, Seaborn, Plotly, Excel
Tools & Concepts: REST APIs, KPIs, Dashboards, Git, Flask, FastAPI, HTML, CSS, React.js

Experience

Data Analytics Job Simulation – Deloitte (via Forage) April 2026
Forage Virtual Experience Program *Remote*

- Cleaned raw business datasets, resolving inconsistencies and errors to prepare data for downstream analysis
- Built a Tableau dashboard to visualize key business metrics, enabling data-driven decision making

Full Stack Developer Intern June 2025 – July 2025
TechAsia Mechatronics Pvt Ltd *Mumbai, India*

- Built React.js frontend components for a live product showcase site displaying the mechatronics product catalog
- Managed and queried a SQL database to retrieve and organize product data for frontend display

Projects

NeuroAI – Explainable AI-Based ASD Classification & Severity Estimation | GitHub 2026
Python, PyTorch, Scikit-learn, FastAPI, React, SHAP, Librosa

- Built a multimodal clinical-support system integrating brain MRI, speech acoustics, and behavioral screening for ASD detection and severity estimation
- Achieved 96.55% test accuracy on binary ASD classification (Random Forest) and 84.21% accuracy (0.91 AUC) on MRI classification using a ResNet18 + EfficientNet-B0 ensemble
- Implemented explainability using SHAP (TreeExplainer) and Grad-CAM++, benchmarked across 17 models
- Developed a full-stack architecture using FastAPI and React with automated PDF report generation

Hotel Booking Analysis – Exploratory Data Analysis | GitHub 2026
Python, Pandas, Seaborn, Matplotlib, EDA, Data Cleaning

- Performed end-to-end EDA on a 119,390-row hotel booking dataset (2015–2017), removing 31,994 duplicate records (about 27%) and correcting flawed date fields to ensure data integrity
- Quantified revenue impact: $22.97M earned vs. $11.47M lost to cancellations, by hotel, deposit type, and season
- Built visualizations covering seasonality trends, cancellation patterns, and ADR analysis using Pandas and Seaborn

Education

K. J. Somaiya Institute of Technology Mumbai, India
Bachelor of Technology (B.Tech) – Information Technology, CGPA: 9.08/10 | Full-time *2023 – 2027 (Expected)*
Relevant Coursework: DSA, DBMS, Statistics & Probability, Operating Systems, Computer Networks
Strong Subjects: DBMS, Statistics & Probability, Data Structures & Algorithms

Achievements

Winner – Institute Level Round, Smart India Hackathon (SIH) 2025
Developed EcoSnap, a rewards-based app that incentivizes eco-friendly actions via image verification and a credit system.
